Professional Summary

Aspiring Machine Learning Engineer and Full Stack Developer with experience in geospatial analytics, computer vision, NLP, and scalable web applications. Worked on end-to-end machine learning and data science solutions involving forecasting, clustering, population modeling, and intelligent automation systems. Experienced in building production-ready applications using modern full stack technologies and collaborating directly with enterprise clients to deliver data-driven business solutions.

Education

New Horizon College of Engineering

Bachelor of Engineering in Artificial Intelligence and Machine Learning

Expected 2026

Bangalore, Karnataka

- **CGPA:** 8.64
- **Relevant Coursework:** Machine Learning, Deep Learning, Computer Vision, Large Language Models, RAG Pipelines, Agentic AI Systems, Database Management Systems, Statistical Mathematics, and Full Stack Development

Experience

GeoIQ (Lenskart)

Data Science Intern

July 2025 – January 2026

Bangalore, India

- **Client-Facing Responsibilities**
- Worked directly with enterprise retail clients including Lenskart, Cult.fit, Bata, Hush Puppies, Naturals, Purple, and Manyavar to support market expansion and business strategy decisions using location intelligence products.
- Participated in requirement gathering sessions, face-to-face meetings, product discussions, and strategy presentations to understand client needs and deliver actionable business insights.
- Developed geo-dashboards, heatmaps, and visual analytics reports to present demographic, revenue, and expansion insights to business and client stakeholders.
- Collaborated closely with product, analytics, and business teams to refine deliverables based on client feedback and operational requirements.
- **Technical & Internal Responsibilities**
- Contributed to RetailIQ by building and maintaining geospatial and socio-economic datasets used for retail site selection, customer segmentation, and market analysis across India.
- Built forecasting, geospatial regression, and clustering models to identify high-potential untapped markets and estimate business performance across different regions.
- Analyzed census demographics together with building height and density data to model fine-grained population distribution across urban regions in India.
- Engineered scalable data pipelines and model features using large-scale open-source geospatial datasets to improve data quality, coverage, and model accuracy.

Mosler

Business Intelligence Intern

February 2025 – May 2025

Remote

- Re-structured large volumes of unorganized hotel access logs into clean analytical datasets for business intelligence and operational monitoring.
- Analyzed booking and access-control data to identify revenue leakage caused by unauthorized room usage, abnormal access patterns, and operational inefficiencies.
- Built scalable ETL pipelines to consolidate heterogeneous logs across multiple schemas into a unified analytics workflow.
- Developed interactive dashboards and visualizations to help teams monitor trends, investigate anomalies, and improve operational decision-making.

MDX.ai

ML Intern

August 2024 – December 2024

Remote

- Cleaned, normalized, and transformed large-scale medical document datasets including PDFs and OCR outputs to support NLP model training workflows.

- Automated preprocessing and validation pipelines using Python, reducing manual QA effort by over 60% and improving consistency across CSV, JSON, XML, and OCR-based inputs.
- Collaborated with ML engineers to convert annotated medical datasets into model-ready formats for downstream machine learning tasks.

Key Achievements

Won **3 inter-college hackathons** alongside my college team by building end-to-end AI and full stack applications under tight development timelines.

Developed multiple Generative AI applications from the ground up, including intelligent assistants, RAG-based systems, and AI-powered automation tools integrating LLMs, vector databases, and modern full stack frameworks.

Built a stock market brokering and analytics platform featuring portfolio tracking, market visualization, real-time analytics, and predictive insights for investment decision-making.

Projects

AI-Powered Student Portal SaaS Platform | *Next.js, Expo, PostgreSQL, MongoDB, Judge0, Python, Meta API*

- **Client-Facing Product Responsibilities**
- Built and scaled a multi-tenant SaaS student assessment and learning platform for schools and colleges supporting coding tests, MCQ assessments, interview preparation, academic evaluations, and engagement workflows.
- Worked directly with administrators to gather requirements, customize institution-specific workflows, onboard clients, and refine features based on operational feedback.
- Successfully sold and deployed customized versions of the platform across 4 educational institutions.
- Integrated academic calendars, discussions, course management, DSA roadmaps, and automated communication systems to improve student and parent interaction.
- **Technical Responsibilities**
- Developed a full-stack web platform using Next.js and a cross-platform mobile application using Expo.
- Designed scalable backend systems supporting 3000+ users including authentication, RBAC, assessment engines, database architecture, and APIs.
- Integrated Judge0-based code execution for real-time coding assessments and automated evaluation workflows.
- Built **Jessica**, an AI-powered WhatsApp assistant using Meta APIs and MCP server integrations to automate parent communication and administrative workflows.
- Developed a deep learning-based AI proctoring system using webcam footage analysis to detect malpractice during examinations.

Research and Publications

Privacy-Preserving and Efficient Border Surveillance System using Advanced Deep Learning and Cryptographic Techniques

IEEE I-SMAC 2024 – DOI: 10.1109/I-SMAC61858.2024.10714893

Machine Learning Optimisation: Adaptive Hessian-Free Optimisation

IJARCCCE 2024 – DOI: 10.17148/IJARCCCE.2024.13653

A Comprehensive Analysis of Natural Language Processing

IJARCCCE 2024 – DOI: 10.17148/IJARCCCE.2024.13617

Skills

Programming	Python, JavaScript, TypeScript, Java, C++, SQL, HTML, CSS
Machine Learning & AI	PyTorch, TensorFlow, Scikit-learn, Transformers, LangChain, RAG Pipelines, CrewAI, YOLOv5, OpenCV, CNNs, NLP, Computer Vision, Generative AI, XG-Boost, Hugging Face, Ollama
Data Science	Pandas, GeoPandas, NumPy, Plotly, Seaborn, Forecasting, Clustering, Regression Modeling, Geospatial Analytics, Data Visualization
Frameworks & Tools	NextJS, React, React Native, Flutter, Flask, Django, Streamlit, Docker, PostgreSQL, MongoDB, Vector Databases, Judge0, TailwindCSS, EC2, Android Studio
Core Skills	Leadership, Client Interaction, Product Thinking, Communication, Problem Solving, Team Collaboration, Analytical Thinking
